**May 29 - June 2nd**

**2023**

The University of Havana, on the eve of its 295th anniversary, to be celebrated on January 5, convenes the International Scientific Convention “Universidad de La Habana 2023”, to be held between May 29 and June 2 next year at the University of Havana.

The role of science and innovation is becoming increasingly important in the main processes of this institution, as well as in meeting the demands and expectations arising from the government sector at all levels, from all the agencies of the country's central administration and from the business sector.

The Convention should promote the balance of knowledge, as well as its projection in key development areas of diverse fields of knowledge in this institution. The event hosts various topics on biotechnology and biomedical sciences; renewable energies; environment and sustainable development; basic sciences; local development; problems of higher education in the 21st century; economic and public administration issues; relations with the United States; public policies; cultural, archival, and heritage processes. It is aimed at scientists and academics from the country and the world, as well as students.

The University of Havana welcomes you. It will be a pleasure to count on your presence and experience at this important event.
